

## **Illicit Discharge Detection and elimination**

An illicit discharge is defined as any discharge, unless otherwise stated by the City, not composed entirely of storm water. Illicit discharges typically enter a system through an unwarranted connection. The City's storm water conveyance systems are sometimes used illegally as an inexpensive and/or convenient alternative to proper disposal of wastes or wastewater. These illegal disposals can occur as illicit connects from businesses or from illegal dumping into storm drain inlets.

***If you see someone dumping an illegal substance into the storm sewer system please contact the City of Smiths Station at 334-297-8771.***
